

# ROBOTTO

## Site Safety

Enabling safe biomass storage with advanced monitoring systems, giving organizations real-time volume and temperature measurements.

- 🌐 Assisted Autonomy
- 🚫 Object Avoidance
- Situational Flight Paths
- 📷 AI-Powered Detection

Providing critical infrastructure with industry leading intelligent robotics.

# ROBOTTO

## Site Safety

Robotto's Site Safety biomass monitoring system is currently compatible with Robotto HAWK UAV and will soon be available as a drone-in-a-box system.

### Integrated data reporting

Robotto understands that biomass presents a very real risk to your organization, and conducting regular and systemized monitoring of this unstable substance is vital for overall operations.

This is why Robotto's Site Safety biomass monitoring system integrates into your existing data management system, such as Microsoft One Drive.

#### Assisted Autonomy

UAV autonomously plans flights, takes off, and lands.

#### Object Avoidance

Geofencing and 360 degree sensors enable best-in-class object avoidance.

#### Situational Flight Paths

In air flight path moderation to follow the border of the stock

#### AI-Powered Detection & Analysis

AI biomass detection, volume and temperature calculation and reporting

Developed with ESA

In operation in CPH

Calculates total volume

Measures temperature

Developed in partnership with:
